

1. Multiply out the expression to find the Sum of Products (SOP) with 3 terms.

Hint: first use the theorem $(x + y)(x + z) = x + yz$, then use $(x + y)(x' + z) = xz + x'y$

$$(D + A)(D + B + F')(D + E + F)$$

2. Find F and simplify to Sum of Products (SOP) form.

3. Factor the following expression to obtain a Product of Sums (POS)

$$TW + UY' + VW$$
